

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) An apparatus comprising:  
walls enclosing a process chamber;  
a wafer susceptor positioned within the chamber;  
a first exhaust conduit in fluid communication with the chamber and adapted to receive a flow of radial exhaust gas; and  
a processing gas source in fluid communication with the chamber through a gas distribution showerhead, the gas distribution showerhead comprising[[:]]:  
a first channel in fluid communication with the processing gas source and with apertures distributed over a lower surface of the showerhead, wherein the apertures define a first area; and  
a second channel separate from the first channel and in fluid communication with a second exhaust conduit and with exhaust apertures distributed over the lower surface of the showerhead, wherein the exhaust apertures define a second area and a ratio of the first area to the second area varies as a function of radial distance from the center of the gas distribution showerhead.
2. - 4. (Canceled)
5. (Previously Presented) The apparatus of claim 1 wherein the ratio of the first area to the second area varies linearly as a function of radial distance from the center of the gas distribution showerhead.
6. (Previously Presented) The apparatus of claim 1 wherein the ratio of the first area to the second area varies nonlinearly as a function of radial distance from the center of the gas distribution showerhead.

7. (Previously Presented) The apparatus of claim 1 wherein the ratio of the first area to the second area increases as a function of radial distance from the center of the gas distribution showerhead.

8. (Previously Presented) The apparatus of claim 1 wherein the ratio of the first area to the second area decreases as a function of radial distance from the center of the gas distribution showerhead.

9. (Original) The apparatus of claim 1 wherein the first exhaust conduit and the second exhaust conduit are in fluid communication with a common foreline.

10. (Previously Presented) The apparatus of claim 9 wherein the first exhaust conduit is in fluid communication with the common foreline through a first valve and the second exhaust conduit is in fluid communication with the common foreline through a second valve.

11. (Original) The apparatus of claim 1 wherein the first exhaust conduit and the second exhaust conduit are in communication with a common vacuum pump.

12. (Original) The apparatus of claim 1 wherein the first exhaust conduit and the second exhaust conduit are in communication with separate vacuum pumps.

13. - 35. (Canceled)
